**TecSec Files Patent Infringement Suit
Against IBM, SAP, SUN, eBay, Adobe, Cisco, Oracle, and Others**

Washington — February 8, 2010 — Hunton & Williams LLP and DiNovo Price Ellwanger & Hardy LLP filed a patent infringement suit on behalf of client TecSec, Incorporated against several of the world’s leading technology companies. The defendants include IBM, SAS Institute, SAP, Cisco, SUN Microsystems, Sybase, Software AG, Adobe, eBay, PayPal, and Oracle. The suit was filed on Friday, February 5, 2010, in the U.S. District Court for the Eastern District of Virginia.

The complaint includes allegations of infringement of 11 U.S. patents issued to TecSec covering core encryption technology used by the defendants’ customers to protect valuable commercial data, such as credit card information, health care information, and other information companies are required by law to secure. The complaint alleges the defendants have earned billions of dollars of revenue through the unauthorized use of TecSec’s patented encryption technology in the manufacture and sale of numerous database management systems, application servers, and processing systems. These include IBM’s DB2 and WebSphere Application Server; Oracle’s Application Server and Oracle Database system; and SUN’s UltraSPARC processors. In addition to seeking damages, the suit asks the court to permanently bar the defendants from selling any products using TecSec’s patented technology.

TecSec sued Microsoft last year alleging infringement of some of the same patents involved in the complaint just filed. The parties settled in September 2009.

“TecSec has suffered irreparable harm by the defendants’ unauthorized sale of systems and methods covered by its patents,” said **Brian M. Buroker**, head of the Hunton & Williams intellectual property practice and lead counsel to TecSec. “The defendants have earned billions of dollars selling, supporting, and providing consulting services for products that incorporate TecSec’s technology without providing any compensation. This suit seeks justified redress for TecSec.”

“We have invested significant time and resources in the development of this technology, which others have used to secure positions of dominance in the marketplace,” said **Edward M. Scheidt**, TecSec’s founder and chief scientist. “By making unauthorized use of our innovations, the companies named in this suit have prevented us from leveraging our own technology. We are asking the court to do what is required by law and allow us to benefit from the technology we invented.”

Scheidt founded TecSec in 1990 after a 26-year career with the CIA. According to the CIA web site, Scheidt “made a career of keeping the nation’s secrets safe by utilizing codes.” More information on Scheidt can be found at <http://www.tecsec.com/about/about.htm> as well as at
